Subject: RE: Can we PLEASE stop shooting ourselves in the foot?

Going forward, anyone running these command-line interface anti-spyware ads will get one and only one warning to remove it. If they do it a second time, they will be permanently banned from our network. This is going to be the only effective way we have of policing this junk, which is likely coming in through a 3rd-party redirect.

Aurora is pretty spooky software and we installed it as a recovery on a number of machines that had dead ad clients as well.

Never mind the links below. This is our stalker friend.

http://www.webhelper4u.com/tnewswritigs/bolger_aurora.html

BUT.....

Ads like this are worse than shooting ourselves in the foot.. PLEASE CAN WE STOP... Please look at the snapshot of the Aurora popup below.
