Subject: Well...

Since I can't sleep after the last batch of alerts I thought I would do a bit of surfing. Just out of curiosity, does this still work to remove our client?

IT IS GONE!...i cant believe it lol...i followed these directions that i found in another post...THANK YOU DMR AND KID FOR YOUR HELP

Please download the trial version of Ewido Security Suite here:

<http://www.ewido.net/en/download/>

Install it, and update the definitions to the newest files. Do NOT run a scan yet.

Please download Nailfix from here:

<http://users.pandora.be/bluepatchy/nailfix.zip>

Unzip it to the desktop but please do NOT run it yet.

Next, please reboot your computer in Safe Mode by doing the following:

- 1) Restart your computer
- 2) After hearing your computer beep once during startup, but before the Windows icon appears, press F8.
- 3) Instead of Windows loading as normal, a menu should appear
- 4) Select the first option, to run Windows in Safe Mode.

For additional help in booting into Safe Mode, see the following site:

<http://www.pchell.com/support/safemode.shtml>

Once in Safe Mode, please double-click on Nailfix.bat. Your desktop and icons will disappear and reappear, and a window should open and close very quickly --- this is normal.

Then please run Ewido, and run a full scan. Post the log from the scan here for me.

Then please run HijackThis, click Scan, and check:

F2 - REG:system.ini: Shell=Explorer.exe C:\WINDOWS\Nail.exe

Close all open windows except for HijackThis and click Fix Checked.

Restart your computer in normal mode and please post a new HijackThis log, as well as the log from

• Fwd: Well...

{ the Ewido scan.
