Deven/Blair

I understand that a couple of people I know have "caught" a really bad "adware" object (one person said "the most aggressive pop up that I have ever seen") called Aurora (tracked to Direct Revenue) that apparently has caused great problems on their computers and they have had serious problems trying to figure out how to remove it. They both said that they have no idea how they caught it. You and Blair should make sure that the company is squeaky clean in it's approach and also make sure that there is no liability back to the firm. Apparently this new approach is relatively new and is now being deployed on a lot of desktops. This looks like a pretty serious issue.
Scott
